Business problem:

For better living for better job, better employment we need to go from a city to another city or from a neighbourhood to various neighbourhood whie residing in the same city. People have different habbits different likes, according to them its little bit hard to select the best city or neighbourhood in once. Weather in some cities cold some sunny, some are smart city and some are not. In case of neighbourhoods, some having much polluted area, much temple much crowd; some are having universities, hospitals, companies etc.

People having varities of preferences for varities of cities as well as neighbourhoods.People are residing in different neighbourhood. In this project we will collect some preferences for some neihghborhoods or the neighbourhoods people are residing in and recommend them, the optimal neighbourhood to put up.
